

We are looking for a
Full Stack Engineer

Sydpro is Australia's premier remote staffing provider with a satellite office in Colombo, Sri Lanka that began operations in 2014 with the aim of introducing the cream of Sri Lanka's ICT workforce, to contribute meaningful value to our Australian client base.

We are looking for a highly skilled motivated **Full Stack Engineer** with **expertise in Ruby on Rails, React and Typescript** to join our Australian Client and they work in a microservices environment hosted on AWS with a great deployment pipeline courtesy of Linc and Convex.

You will be responsible for the implementation and successful delivery of new product features, working directly with designers, product managers and your team. You are passionate about design and development, have front-end proficiency, curiosity and competency for back-end systems and are a creative problem solver.

This is a wonderful opportunity with a large Australian company and the successful applicant will be required to deliver services to Australian working hours. Also, it's a fun and supportive environment with plenty of opportunity to grow and learn.

A typical day for you may look like this;

- You'll be building reusable components and developing our frontend architecture, ensuring consistent and functional implementation across multiple devices and platforms
- Design and test appropriate user interactions to guide our customers
- Own your features from code, documentation to production
- Create mobile optimised experiences for our increasingly mobile user base
- Work with our design team to help create new features and experiences
- Provide reliable estimates and uncertainties for your projects and features, then deliver on them
- Create robust and scalable APIs that allow our customers to get the data they need, quickly

About you?

- You are a trusted engineer who has completed either a comprehensive software engineering boot camp, CS or equivalent degree, or has relevant work experience
- You are customer-obsessed, detail-oriented, enjoy working on highly technical teams and use data and insights to make decisions
- Experience in core programming languages including **Ruby on Rails, React and Typescript** an advantage
- Have a working understanding and be able to use HTML, CSS and JavaScript
- Experience with major Open Source databases. Postgres an advantage
- Motivation, grit and ambition to grow into the role

What we'll expect of you;

- You are comfortable developing complex systems using JavaScript, Ruby/Rails and React
- You are comfortable using the command line, and version control using Git
- You should know your way around one of the major Open Source databases, ideally Postgres
- We write code for our future selves. Your output should be documented, testable, reusable and maintainable
- You are proficient understanding, writing, and reviewing HTML, CSS and JavaScript, building reusable components and ensuring consistent and functional implementation across multiple devices and platforms
- As part of a team, you help translate business requirements into customer experiences by thinking first from a customer's perspective and translating these concepts into designs, prototypes and production-quality implementations

An attractive salary package awaits the right candidate
